

<b>No. / Title:</b> 17) Acknowledging carbon storage as a Principle 9 High Conservation Value	<b>Category:</b> Policy
<b>MOTION:</b>	
The GA requests FSC to develop, through appropriate stakeholder consultation, a proposal for how to include globally, regionally and nationally significant carbon stocks as High Conservation Values in Principle 9, taking account of potential consequences for a wide range of uses and users.	
<b>Purpose and/or additional information:</b>	
As climate change tops the global environmental agenda, many stakeholders expect climate concerns to be reflected in FSC standards and procedures. An FSC Carbon Working Group was set up in early 2010 to examine the issue and make recommendations. Although the P&C Working Group adopted some of the Carbon WG's proposals, the suggestion to incorporate carbon stocks as a new High Conservation Value was not taken onboard. The issue was discussed at a stakeholder meeting convened in November to assist the P&C WG, and a meeting on interpretation of the HCVs convened by FSC in January, but there was not agreement on specific recommendations. Nonetheless, we believe that significant carbon stocks should be included as a High Conservation Value on par with other critical ecosystem services, but without changing the essential character and utility of the HCV concept for its wide range of users within and outside FSC.

<b>MOTION:</b>	
A chamber balanced working group shall be established to consider under what circumstances and conditions post 1994 converted plantations may be able to be FSC certified.	

<b>No. / Title:</b> 18) Potential certification of post 1994 converted plantations	<b>Category:</b> Policy
<p><b>Purpose and/or additional information:</b></p> <p>Opening an appropriate avenue for plantation companies, that are committed to responsible plantation management and no further conversion, but that have legally converted natural forest to tree plantations after 1994, to be FSC-certified under certain conditions may provide important social and environmental benefits. Experience from for example Latin America indicate that FSC certification has had a positive impact on plantation management and shifted the paradigm towards transparency, better conservation, increased restoration of native ecosystems, and respect for indigenous peoples' and workers rights'.</p> <p>This motion respects the recommendations of the FSC Plantation Review as well as the FSC Global Strategy and motion 28 from the GA 2008 to increase certification in the tropics.</p>

<p><b>MOTION:</b></p> <p>That FSC International establish and support a committee to examine Indigenous peoples' involvement in FSC and the application of P3 in certifications with a view to upholding the United Nations Declaration on the Rights of Indigenous Peoples and ensuring that FSC effectively supports Indigenous peoples' rights in the application of FSC standards.</p>	
<p><b>Purpose and/or additional information:</b></p> <p>Previous studies of Indigenous peoples' involvement have not resulted in improved application of P3 [outline past studies P2/P3 study].          Explore intent of P3 in FSC standards around the world.          Review challenges in application of P3 in various jurisdictions around the world.          Conduct a sampling of Indigenous peoples whose territories are covered by FSC certifications to assess the satisfaction of Indigenous peoples with FSC certification.          Ensure that committee members are the most knowledgeable people available to conduct this study, i.e. Indigenous people themselves, those who have been involved in Aboriginal/social chambers, those who have been involved in FSC standards development around P3.</p>
